

# Using Computational Intelligence for Mining Agriculture Data

Georg Ruß

<sup>1</sup>Otto-von-Guericke-Universität Magdeburg, Germany

FAIRS'08, 08.12.2008, Cambridge

Outline

Motivation

Part I: Data Mining& Modeling

Part II: Data Analysis

# Motivation: Precision Farming

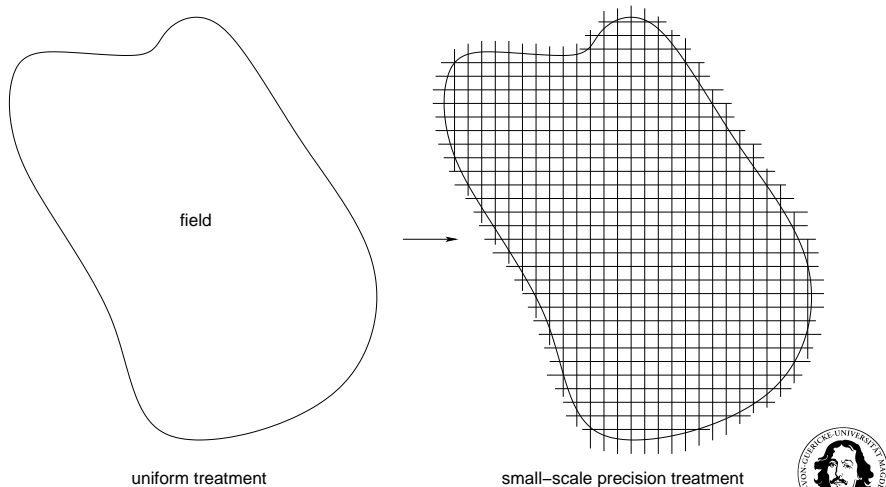

Figure: Precision Farming: from uniform field to small-scale area

# Motivation: Precision Farming

- ▶ precision farming
  - ▶ divide field into small-scale parts
  - ▶ treat small parts independently instead of uniformly
  - ▶ cheap data collection
  - ▶ GPS-based technology
- ▶ lots of data (sensors, imagery, GPS-tagged)
- ▶ use data mining to
  - ▶ improve efficiency
  - ▶ improve yield

# Data Flow Model

Figure: Data Mining Context

## Part I: Data Mining & Modeling

- ▶ input: numeric variables from the field(s)
- ▶ target: yield variable
- ▶ regression task
- ▶ evaluate models
  - ▶ neural network (MLP) as reference from earlier work
  - ▶ neural network (RBF)
  - ▶ regression tree
  - ▶ SVM regression
- ▶ try to understand models: self-organizing map (experimental!)

## Part II: Data Analysis

- ▶ new sensors and ideas for measuring a field's heterogeneity are being developed
- ▶ evaluate the data from those sensors with respect to its capability to yield prediction
- ▶ visualize sensor data and their predictive capability accordingly

# Questions?

Q & A.
